

Education

Wuhan University, School of Earth and Space Sciences
B.S. in Geophysics
GPA: 3.87/4.00 (Rank: 2/23)
TOEFL: 85/120

Wuhan, China
Sep 2022 – Jun 2026

Research Interests

- **Seismology:** Earthquake rupture processes, dynamic rupture modeling, seismic source inversion, induced earthquake.
- **Tectonics:** Fault systems, crustal deformation, plate boundary processes, and volcano-tectonic interactions.
- **Geodynamics:** Stress and strain evolution in the lithosphere, crust-mantle interaction, and deformation mechanisms.

Research Experience

Undergraduate Research

Jan 2023 – Present

Supervisor: Prof. Guoyan Jiang, Co-supervised by Postdoc. Yingwen Zhao, Wuhan University

- Processed D-InSAR data using GAMMA software to extract coseismic surface deformation from the 2023 Xinwen Ms 4.9 earthquake sequence (Sentinel-1).
- Inverted fault geometry and slip distribution based on deformation modeling.
- Analyzed earthquake catalogs to investigate spatiotemporal patterns of aftershocks; applied the Epidemic-Type Aftershock Sequence (ETAS) model to assess triggering behavior.
- Additional work includes GNSS velocity field analysis to study crustal strain distribution.

Technical Skills

Programming: Python, MATLAB, C, C++, C#, Shell

Tools and Software: GMT, Git, LATEX, Markdown, HTML, Gamma

Languages: Chinese (native), English (fluent)
