

Education

The Chinese University of Hong Kong (CUHK)

PhD in Earth and Environmental Sciences

Advisor: Prof. Hongfeng Yang

Hong Kong, China

Sept 2026 – Present

Wuhan University, School of Earth and Space Science and Technology

B.S. in Geophysics

Advisor: Prof. Guoyan Jiang

GPA: **3.88**/4.00 | Rank: **2**/17

TOEFL iBT: **103**/120 (Date: Nov 2025)

Wuhan, China

Sept 2022 – Jun 2026

Research Interests

- **Seismology:** Earthquake rupture processes, dynamic rupture modeling, seismic source inversion, finite-fault inversion, and induced seismicity.
- **Geodynamics:** Stress and strain evolution in the lithosphere, crust-mantle interaction, subduction and mountain building processes.
- **Tectonics:** Crustal deformation, plate boundary processes, and volcano-tectonic interactions.

Research Experience

Finite-Fault Inversion of the 2025 Myanmar Earthquake

Independent Project

Hong Kong / Wuhan, China

Supervisors: Prof. Hongfeng Yang (The Chinese University of Hong Kong) and

Prof. Guoyan Jiang (Wuhan University)

Aug 2025 – Present

- Used TauP to estimate the arrival time of P wave and S wave, and corrected the time difference of NPW station.
- Computed approximate rupture speed on the fault and particle motion of the NPW station.
- Conducting finite-fault inversion to resolve the rupture process and slip distribution of the 2025 Myanmar Mw7.7 earthquake.

Seismogenic structure and rupture characteristics of the 2023 Ms 4.9 Earthquake in Xingwen (Sichuan, China)

Independent Project

Wuhan, China

Supervisor: Prof. Guoyan Jiang (Wuhan University)

Jun 2023 – Jun 2025

- Utilized GAMMA software to process InSAR data (Sentinel-1) and extract coseismic surface deformation associated with the 2023 Xingwen Ms4.9 earthquake sequence.
- Conducted inversion of fault geometry and slip distribution based on the derived surface deformation models.
- Researched on correlations between aftershock activity and seismogenic fault based on spatiotemporal patterns of aftershocks.

Publications

Guanyu Mao, Yingwen Zhao*, Guoyan Jiang*, Haoran Dong, Quanshu Zhao, Jian Xu and Junlun Li (2026). Seismogenic Structure and Rupture Characteristics of the 2023 Ms 4.9 Earthquake in Xingwen (Sichuan, China). *Earthquake Science*, 39. DOI: 10.1016/j.eq.s.2026.03.001

Awards

Yu Gang Song Xiao Scholarship	2025
The First Prize Scholarship of Wuhan University	2025
The First Prize Scholarship of Wuhan University	2024
The First Prize of Zheng Geru Scholarship	2024
The Second Prize Scholarship of Wuhan University	2023
National Encouragement Scholarship	2023

Technical Skills

Programming: Python, MATLAB, Shell, C, C++

Tools and Software: GMT, SAC, ObsPy, Git, L^AT_EX, GAMMA

Languages: Chinese (native), English (fluent)

Leadership Experience

- **Youth Volunteers Association** School of Geodesy and Geomatics, Wuhan University
Head of Project Division Jun 2023 – Jun 2024
- **College Choir** School of Geodesy and Geomatics, Wuhan University
Vice Captain Oct 2023 – Oct 2024
- **Geophysics Class of 2022** Wuhan University
Class Monitor Sept 2022 – Present
- **Geophysics Class of 2025** Wuhan University
Freshman Assistant Jul 2025 – Present

Exchange Study Experience

13th University Scholars Leadership Symposium (USLS) Kuala Lumpur, Malaysia
Delegate Aug 4th 2025 – Aug 9th 2025

- Participated as a delegate in the International Youth Leadership Symposium, collaborating with representatives from over 80 countries to discuss global humanitarian and sustainability challenges.
- Took part in Kindness Day volunteer activities with refugee children, supporting education, community inclusion, and fostering empathy and social responsibility.
- Strengthened cross-cultural collaboration and leadership skills, gaining deeper awareness of humanitarian issues in the broader context of hazards and global social resilience.
